What Finland Got Right

For two decades, Finland's education system has been the subject of international fascination. Its students consistently perform well in global assessments, yet they start school at seven, have shorter school days than most of their European peers, and take almost no standardised tests until the end of secondary school. How can a system that seems to ask so little achieve so much?

Part of the answer lies in the status of teachers. In Finland, teaching is among the most respected professions, and competition for places on teacher-training programmes is fierce: only about one in ten applicants is accepted. All teachers must hold a master's degree, and once qualified they enjoy considerable freedom to design their own lessons. Not only are they trusted, but they are also rarely inspected.

Equality is another cornerstone. Almost all Finnish children attend state schools, and the difference in results between the best and worst schools is among the smallest in the world. Extra support is provided early and quietly to pupils who fall behind, so that very few drop out.

Another feature that visitors often notice is the amount of free time. Finnish pupils have a fifteen-minute break after every lesson, and they are encouraged to spend it outside, whatever the weather. Teachers believe that children who move regularly concentrate better, and homework is kept to a minimum, especially in primary school. Not only does this approach reduce stress, but it also leaves time for hobbies, sport and family life.

Critics, however, warn against treating Finland as a miracle that can simply be copied. The country is small, relatively wealthy and culturally homogeneous, and its results have actually declined somewhat since 2006. Some Finnish educators themselves argue that the system has been romanticised abroad, and that the mobile-phone era poses challenges that no curriculum has yet solved.

Nevertheless, several lessons appear transferable. Investing in teacher quality, reducing high-stakes testing and providing support before problems become serious are policies that have improved results elsewhere, from Estonia to parts of Canada. Only when such reforms are adapted to local conditions, rather than imported wholesale, do they seem to succeed. Policymakers elsewhere would therefore be wise to study not only Finland's results but also the social conditions that made them possible.

4 Reading · Questions

1. What surprises observers about Finnish schools?
   A) They have very long school days.
   B) They achieve a lot with few tests and short days.
   C) Children start school at five.
   D) They copy other systems.

2. What is true about Finnish teachers?
   A) Most have only a bachelor's degree.
   B) They are inspected frequently.
   C) Entry to teacher training is very competitive.
   D) They follow a strict national plan.

3. Why do few Finnish students drop out?
   A) Exams are easy.
   B) Help is given early.
   C) Classes are very small.
   D) Private schools take weak students.

4. What is the writer's conclusion?
   A) Finland's system should be copied exactly.
   B) Finland's results are no longer good.
   C) Some ideas can work elsewhere if adapted.
   D) Testing is the key to success.

5. Finnish pupils take many standardised tests. _____
6. Teaching is a respected profession in Finland. _____
7. Most Finnish children go to private schools. _____
8. Finland's results have improved every year since 2006. _____

The Accidental Scientist

Many of history's greatest discoveries happened by accident. In 1928, Alexander Fleming returned from holiday to find that mould had contaminated one of his bacterial cultures — and that the bacteria around it had died. Had he simply thrown the dish away, as many colleagues would have done, the world might have waited years longer for penicillin, the first antibiotic.

Fleming's story is often used to illustrate the role of luck in science, but this interpretation is misleading. Accidents happen in laboratories every day; what matters is whether someone recognises their significance. As the chemist Louis Pasteur famously remarked, "chance favours the prepared mind." Fleming had spent years studying bacteria and was therefore able to see what others would have missed. Other famous examples confirm this. The microwave oven was invented after an engineer noticed that a chocolate bar in his pocket had melted near a radar machine, and the first artificial sweetener was discovered when a chemist forgot to wash his hands before dinner. In each case, the discovery depended not on the accident itself but on a curious mind that asked why.

Modern science, however, makes such happy accidents less likely. Research today is highly specialised and heavily dependent on funding, which is usually granted for clearly defined projects with predictable outcomes. Scientists under pressure to publish quickly may have little time to investigate an unexpected result, particularly one that does not fit their original hypothesis. Laboratories have also become more automated, so fewer researchers personally observe every stage of an experiment.

Some institutions are trying to change this. A number of research foundations now offer "blue-sky" grants that allow scientists to explore questions without a fixed goal. Supporters argue that, were it not for such freedom, breakthroughs like the discovery of graphene — first isolated using ordinary sticky tape — would never have occurred. Critics counter that public money must be spent responsibly and that most curiosity-driven research leads nowhere.

The debate is unlikely to be settled soon. Yet history suggests that the most transformative discoveries are rarely the ones anybody planned.

4 Reading · Questions

Summary (1–4): ONE word from the text

Fleming discovered penicillin when (1) _____ contaminated a culture. According to the writer, success depends less on luck than on recognising the (2) _____ of an accident. Today, research is highly (3) _____ and depends on money. Some foundations offer grants without a fixed (4) _____.

5. What does Pasteur's quotation suggest?
   A) Luck is all you need.
   B) Knowledge helps people notice opportunities.
   C) Scientists should take holidays.
   D) Accidents are dangerous.

6. What is the writer's attitude to blue-sky research?
   A) strongly against it
   B) balanced, presenting both sides
   C) completely uninterested

One World, Many Questions

1. _____ Take a typical smartphone. Its design may come from California, its chips from Taiwan, its screen from South Korea, its rare metals from Africa, and it may be assembled in China before being sold in Tashkent. Few products illustrate the interdependence of the modern world so vividly. Even a simple cotton T-shirt may cross several borders before it reaches a shop.

2. _____ Supporters of globalisation point out that, over the past forty years, global trade has helped lift more than a billion people out of extreme poverty. Countries that opened their economies, such as South Korea and Vietnam, have seen dramatic rises in living standards. Cheap imported goods have also allowed ordinary families to buy products that were once luxuries.

3. _____ Yet the benefits have not been shared equally. In many wealthy countries, factory jobs disappeared as production moved to places with cheaper labour, leaving entire towns in decline. It is this sense of being left behind that has fuelled much of the recent political backlash against free trade.

4. _____ Culture, too, has been transformed. Hollywood films, K-pop and global fast-food chains are familiar from Lagos to Samarkand. Critics fear a world in which every high street looks the same, while others argue that cultures have always borrowed from each other and continue to adapt rather than disappear. Uzbek plov, for instance, is now served in restaurants from Moscow to New York.

5. _____ The COVID-19 pandemic exposed a further weakness. When factories in one country closed, shortages of everything from medical masks to car parts rippled across the globe. What many governments learnt is that long supply chains, though efficient, can be fragile.

6. _____ As a result, some economists now speak of "slowbalisation": a world that remains connected but in which companies keep production closer to home and countries protect key industries. For consumers, this may mean slightly higher prices but more reliable supplies. Whether this trend will last remains to be seen.

Headings

A) The risks of depending on distant suppliers

B) Winners and losers

C) A product made by the whole world

D) Global culture: threat or exchange?

E) A slower kind of connection

F) Why smartphones are expensive

G) Escaping poverty through trade

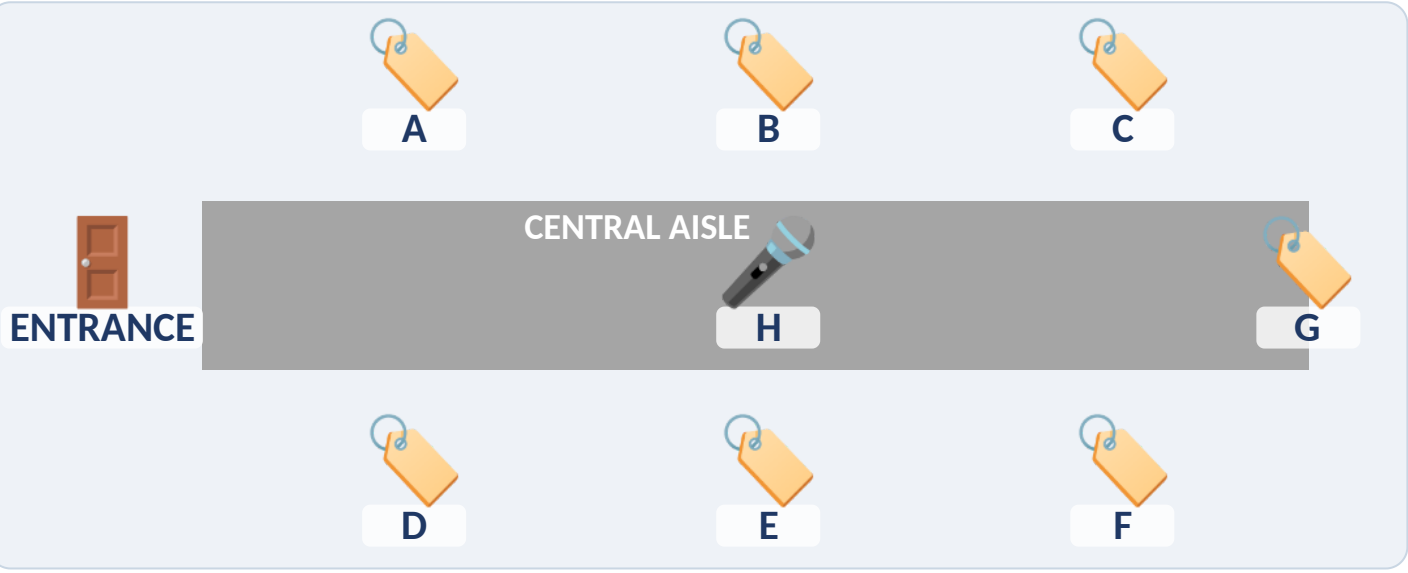

H) The history of the Silk Road

2 C1 model paragraphs

[Opinion] It is my firm conviction that standardised tests fail to measure genuine ability. Not only do they reward rote learning, but they also penalise creative thinkers.

[Both views] Proponents of nuclear power contend that it offers reliable, low-carbon energy. Conversely, critics maintain that the risks of accidents and waste are unacceptable. Having weighed both perspectives, I would argue that renewables are the safer long-term choice.

[Adv / Disadv] The most significant benefit of telemedicine lies in its ability to reach remote villages. This is not to say that it is without its drawbacks: unreliable internet remains a serious barrier.

[Problem–Solution] A pressing concern in megacities is air pollution, owing to which respiratory diseases are rising. Were governments to invest in public transport, this problem would ease considerably.

Gap years — a year between school and university spent travelling, volunteering or working — have long been popular in Britain and Australia. Supporters claim that students return more mature and motivated, and some universities report that such students are less likely to drop out. Critics argue that gap years are a privilege of the wealthy, since many young people cannot afford a year without income. Nevertheless, low-cost options, such as volunteering locally, are increasingly available.

Students who take a gap year are said to be more (1) _____ and are less likely to (2) _____ out. However, critics see it as a (3) _____ of rich families, although cheaper options like local (4) _____ exist.

The Doctor Will See You Now — Online

Before 2020, telemedicine was a niche service used mainly in remote regions where doctors were scarce. Within months of the pandemic, it had become mainstream. Governments relaxed regulations almost overnight, allowing doctors to prescribe medicines after a video call. In some countries, the proportion of consultations carried out by video or phone rose from under 1 per cent to over 40 per cent. Although the figures have since fallen, they remain far above pre-pandemic levels.

The advantages for patients are considerable. Online consultations eliminate travel time and reduce waiting, which is particularly valuable for elderly patients, people with disabilities and those living far from hospitals. For doctors, telemedicine allows a more efficient organisation of the working day, and for health systems under financial pressure, it offers a potential reduction in costs.

Mental health services have benefited in particular. Many patients find it easier to talk about anxiety or depression from the privacy of their own home, and some studies suggest that online therapy can be as effective as face-to-face sessions for certain conditions.

However, the shift has raised concerns. Physical examination remains essential for the accurate diagnosis of many conditions, and some doctors worry that serious illnesses may be missed when they cannot see or touch the patient. A study of skin conditions, for example, found that diagnoses made from photographs differed from in-person diagnoses in roughly one case in five.

There are also questions of equality. Ironically, those who could benefit most from remote consultations — older and poorer patients — are often the least likely to own a smartphone or have reliable internet access. Language barriers and poor hearing can make video calls especially difficult for older patients. Without investment in digital literacy and infrastructure, telemedicine could widen rather than narrow existing health inequalities.

Most experts now favour a hybrid model in which routine follow-ups, prescription renewals and mental health support are offered online, while first consultations and complex cases are handled in person. The challenge for policymakers is to ensure that convenience does not come at the expense of quality.

4 Reading · Questions

1. What happened to telemedicine after 2020?
   A) It disappeared quickly.
   B) It became widely used.
   C) It was banned in some countries.
   D) Only young people used it.

2. Who benefits particularly from online consultations?
   A) young athletes
   B) patients far from hospitals
   C) hospital managers only
   D) pharmacists

3. What did the study of skin conditions show?
   A) Photos are always accurate.
   B) About 20% of diagnoses differed.
   C) Doctors prefer photos.
   D) Skin conditions are rare.

4. What does the writer mean by "ironically"?
   A) The people who most need it often can't access it.
   B) Telemedicine is very expensive.
   C) Older people prefer the internet.
   D) Doctors dislike technology.

5. Telemedicine use is now lower than before 2020. _____

6. Online consultations can save health systems money. _____

7. All doctors support telemedicine. _____

8. Older patients are less likely to have reliable internet. _____

9. Most experts recommend using only online consultations. _____

Every Drop Counts

Central Asia is often described as a region rich in energy but poor in water. In Uzbekistan, agriculture accounts for roughly ninety per cent of all water use, most of it delivered to fields through open canals built during the Soviet era. Experts estimate that up to half of this water may be lost through evaporation and leakage before it reaches the crops.

The consequences are well known. Rivers that once fed the Aral Sea now dry up long before they reach it, and the region's population — and therefore its demand for food and water — continues to grow. Climate change appears to be making the situation worse: glaciers in the mountains, which act as natural water towers, are shrinking, and summers are becoming hotter. In addition, much of the irrigated land has become salty, because water evaporates and leaves minerals behind, which reduces harvests year after year.

Yet solutions exist. Drip irrigation, which delivers water directly to the roots of plants through thin pipes, can reduce water consumption by thirty to fifty per cent while increasing yields. Since 2019, the Uzbek government has offered subsidies to farmers who install such systems, and the area under efficient irrigation has expanded rapidly, although it still represents only a small share of the total. Laser levelling of fields, which makes the ground perfectly flat so that water spreads evenly, is another relatively cheap technique that is being introduced.

Another approach is to change what is grown. Cotton and rice are particularly thirsty crops. Some farmers have switched to fruit, vegetables and nuts, which tend to require less water and are often more profitable on export markets.

Nevertheless, technology alone is unlikely to be sufficient. Water is still very cheap for many users, which arguably gives them little incentive to save it. Many analysts conclude that a combination of investment, fair pricing and regional cooperation between upstream and downstream countries will be required to secure the region's water future. After all, neighbouring countries depend on the same rivers, so decisions taken upstream inevitably affect farmers downstream.

4 Reading · Questions

Summary (1–4): ONE word from the text

Most water in Uzbekistan is used by (1) _____, but much is lost from old open canals. Shrinking (2) _____ make the problem worse. Drip irrigation saves water and increases (3) _____, and the government gives farmers (4) _____ to install it.

5. Why do some farmers grow fruit and nuts instead of cotton?

A) They are easier to harvest.
B) They need less water and earn more.
C) The government banned cotton.
D) They grow faster.

6. What is the writer's main conclusion?

A) Drip irrigation will solve everything.
B) Water should be free.
C) Several measures will be needed together.
D) Agriculture should stop.

💬 Should we go solar?

Homeowner: Solar panels seem to be getting cheaper.
Neighbour: They do, but storage tends to be the problem.
Homeowner: Arguably, a battery would pay for itself in ten years.
Neighbour: Possibly. It depends on how much sun we get.
Homeowner: To a certain extent, yes — but here it's sunny 300 days a year!
Neighbour: Fair point. Maybe I'll look into it too.

Can a Machine Be an Artist?

In 2022, a picture called Théâtre D'opéra Spatial won first prize in the digital art category of a competition in the United States. Nothing unusual about that — except that the picture had been created with the help of an AI program. The artist, Jason Allen, had typed hundreds of instructions into the software and then edited the results. When it was revealed that the (1) _____ had been produced by AI, many artists were furious. Allen himself defended his work, explaining that he had spent more than eighty hours creating it. Some said a line had been crossed; others argued that the (2) _____ of art itself was changing. The debate raises old questions. Art has always reflected the nature of its time. When photography was invented in the nineteenth century, painters feared that the camera would make them unnecessary. Instead, photography became a new form of art, and painting moved in new directions. Supporters of AI argue that the software is simply another tool, like the (3) _____. Critics reply that there is an important difference: a photographer still chooses what to photograph, whereas AI programs learn by copying millions of images made by human (4) _____, often without permission or payment. Some artists have even taken legal action against technology companies, claiming that their work was used to train AI systems. Others, however, have embraced the new tools and use them to generate ideas quickly before painting by hand. Museums and galleries are now facing similar questions. With regard to the law, many countries have not yet decided who owns AI-generated images. Some courts have ruled that only works created by humans can be protected. Whatever the legal answer, one thing seems clear: the (5) _____ between human and machine creativity is becoming harder to define. Perhaps the more important question is not whether a machine can be an (6) _____, but what we want art to do for us.

Choose the correct heading for each paragraph (1–6) from A–H. There are two extra headings. *— 6 abzats — 8 sarlavha*

How Far Should Journalists Go?

1. _____ In 2011, a British newspaper that had existed for 168 years closed down almost overnight. It was revealed that its journalists had illegally listened to the private voicemail messages of celebrities, politicians and even crime victims. The scandal led to a public inquiry and a lasting debate about how far journalists should be allowed to go. Several senior editors were arrested, and the owner publicly apologised to the victims.

2. _____ Investigative journalism has a proud history. Reporters have exposed corruption, environmental disasters and abuses of power that would otherwise have remained hidden. Famous investigations have even forced presidents and prime ministers to resign. Without the freedom to dig into uncomfortable stories, democracy itself would arguably be weaker.

3. _____ The difficulty lies in drawing the line between the public interest and what merely interests the public. A politician's secret financial deals are clearly the public's business; the details of a celebrity's divorce arguably are not, however many readers they attract. Editors must therefore ask whether a story serves a genuine public purpose before publishing it.

4. _____ The digital age has made these questions more urgent. Online, every article competes for clicks, and sensational headlines tend to attract far more attention than careful reporting. Clickbait, critics argue, rewards speed over accuracy and outrage over understanding.

5. _____ Meanwhile, anyone with a smartphone can now act as a journalist. Citizen journalists have filmed events that professional media could not reach, but they rarely follow professional codes of conduct, and their footage can be shared millions of times before anyone checks whether it is genuine. During natural disasters, for example, the first images often come from ordinary people rather than reporters.

6. _____ Some argue for stricter regulation; others warn that governments could use such laws to silence critics. Most media experts favour independent regulators, transparent corrections and, above all, better media literacy among readers themselves.

1 Reading Part 1 (Questions 1–6)

Fill each gap with ONE word. The word is somewhere in the rest of the text.

The Four-Day School Week

In some rural parts of the United States, hundreds of schools have moved to a four-day week. The main reason is financial: by closing on Mondays or Fridays, districts save money on transport, heating, staff and school lunch. Some schools also hoped that a shorter week would help them attract and keep good teachers. At first, parents were worried that their children would learn less. In fact, the evidence on (1) _____ is mixed. Some studies found that students' results stayed the same, while others found small declines, especially in maths. Interestingly, teachers in four-day schools reported higher job satisfaction, and fewer of them left. The extra free day also created new problems. Working parents had to find childcare, and poorer families sometimes struggled to provide (2) _____ for children who usually ate at school. Supporters argue that the free day can be used for medical appointments, (3) _____ and family time. Critics reply that only well-off families can make good use of it. As with any education policy, it is not the (4) _____ itself that matters most, but how it is implemented. Schools that used the extra day for optional lessons and sports clubs saw better (5) _____ than those that simply closed. Whatever the future of the four-day week, it has forced (6) _____ to rethink how school time is used.

2 Reading Part 3 (Questions 7–12)

Choose the correct heading (A–H) for each paragraph. Two extra headings.

7. _____ Bees pollinate about a third of the food we eat, from apples to almonds. Without them, supermarket shelves would look very different.

8. _____ Over the past two decades, bee populations in many countries have declined sharply. Beekeepers in Europe and North America have reported losing up to 40% of their colonies in a single winter.

9. _____ Scientists point to several causes: pesticides, disease, the loss of wild flowers and climate change. It appears that these factors combine, making each other worse.

10. _____ Some solutions are surprisingly simple. Leaving parts of gardens and roadsides wild, planting flowers and reducing pesticide use can make a real difference.

11. _____ Cities have joined in. Rooftop hives can now be found in Paris, London and Tokyo, and city honey is said to be of excellent quality.

12. _____ Not everyone is optimistic. Some researchers warn that urban beekeeping may harm wild bees by competing with them for limited food.

Headings

A) Why bees matter to us
B) A worrying fall in numbers
C) Small actions, big effects
D) A complex combination of causes
E) An unexpected risk
F) Bees in the city
G) How honey is made
H) The most dangerous insects

3 Reading Part 4 (Questions 13–21)

Questions 13–16: A, B, C or D. Questions 17–21: True, False or No Information.

The Paradox of Choice

In 2000, two psychologists conducted a now-famous experiment in a supermarket. On one day, shoppers were offered a free taste of 24 different jams; on another day, only 6. The larger display attracted more people, but those who saw the smaller selection were ten times more likely to buy a jar. Too much choice, it seemed, made people unable to decide.

The psychologist Barry Schwartz later developed this idea into the "paradox of choice": although we believe more options make us freer and happier, beyond a certain point they lead to anxiety, regret and dissatisfaction. Having chosen one option, we keep thinking about the ones we rejected.

Recent research, however, has complicated the picture. Attempts to replicate the jam study have produced inconsistent results, and it appears that the effect depends heavily on context. Experts who know exactly what they want are rarely troubled by large selections; it is inexperienced or uncertain buyers who tend to struggle.

Nevertheless, many companies have drawn practical lessons. Some online shops now offer "recommended" selections rather than endless lists, and several restaurants have shortened their menus. Rarely has a single experiment with jam had such a broad influence.

13. What happened in the jam experiment?
A) More jams led to more sales.
B) Fewer jams led to more sales.
C) Nobody bought jam.
D) Shoppers preferred free samples.

14. According to Schwartz, what can too many options cause?
A) better decisions
B) lower prices
C) regret and anxiety
D) more freedom

15. What does recent research suggest?
A) The original study was fully confirmed.
B) The effect depends on the situation.
C) Experts struggle most with choice.
D) Choice always makes people happy.

16. What is the purpose of the last paragraph?
A) to criticise companies
B) to show the study's practical impact
C) to describe a new experiment
D) to explain how jam is sold

17. The larger jam display attracted more visitors. _____

18. Schwartz carried out the original jam experiment. _____

19. Later studies always got the same results. _____

20. Experienced buyers are usually less affected by large choices. _____

21. Restaurants with short menus make more profit. _____
